* Denotes aircraft or helicopter type is NAW (Night & All Weather) capable.

¹ Optional Rule at the Scenario Designer or Referee's discretion: After about 1985 Indian stands equipped with AFV of Soviet Design may be permitted a Hull Down Modifier of -1 to represent improved attempts to utilise western style combat doctrine. However these vehicles suffer from inherent design flaws if used this way, and should incur the following disadvantage if doing so: AT, AI, & ATGW "Blind Spot" of 6" for every level/contour of height (e.g. A T-72 platoon after 1985 that is on the top contour of a 2-level hill, and is claiming Hull Down has a Blind Spot of 12", therefore it can only use AT, AI, and ATGW at targets over 12" distance from itself - subject to the normal rules for spotting and maximum range). A unit (Battalion) must declare if it is taking HD positions the moment at least one stand in the battalion is eligible to (i.e. is stationary on the top contour of a hill), and all stands will be assumed to do so as soon as they are in position. To lose HD status each stand currently with it must physically move (as per rules) and to avoid returning to HD as soon as a stand becomes eligible again, the battalion must then declare it is no longer attempting to adopt it.

² Stats for ATGW only. At 3" or less MAW is assumed to replace ATGW so factor is always 3 up to 3".
